20

- The process for producing an absorbent composite by contacting a solid supporting material with a mixture comprising at least one polymeric material and at least one crosslinker and curing the mixture on the supporting material wherein the mixture is an emulsion.
 - 2. The process of claim 1 wherein the supporting material is fibers and/or tapes.
- 10 3. The process of claim 1 or claim 2 wherein the supporting material is wovens and/or nonwovens.
 - 4. The process of any of claims 1 to 3 wherein the fibers are filaments and/or staple fibers.
 - 5. The process of any of claims 1 to 4 wherein the fibers are synthetic fibers.
 - 6. The process of any of claims 1 to 5 wherein the emulsion comprises an organic solvent comprising a mineral oil.
 - 7. The process of any of claims 1 to 6 wherein the polymeric material is carboxylrich polymers based on copolymers of vinylically and/or allylically unsaturated carboxylic acids and/or their derivatives.
- 25 8. The process of any of claims 1 to 7 wherein the polymeric material is polymers based on copolymers of acrylic acid and/or on esters and/or amides of acrylic acid and/or of methacrylic acid.
- 9. The process of any of claims 1 to 8 wherein the polymeric material further com-30 prises a granular superabsorbent polymer based on partially neutralized crosslinked polyacrylic acid.
 - 10. The process of any of claims 1 to 9 utilizing covalent crosslinking agents.
- The process of claim 10 wherein the covalent crosslinking agent is a diepoxide.
 - 12. The process of any of claims 1 to 11 wherein said curing is effected in the range from 100 to 200°C.
- 40 13. The process of any of claims 1 to 12 wherein the supporting material is coated, impregnated, padded, foamed or sprayed with at least one polymeric material and subsequently cured.

- 14. An absorbent composite obtainable by any process of claims 1 to 13.
- 15. Sealing comprising at least one absorbent composite according to any one of claims 1 to 13 as well as at least one sealing membrane composed of plastics.
 - 16. The sealing of claim 15 wherein the absorbent composite is disposed between two sealing membranes composed of plastics.
- 17. A use of the absorbent composite of claim 14 in sealing materials, in cable sheaths, to enhance water retention in agriculture and horticulture, to regulate the humidity in rooms and containers and also for moisture regulation in sitting or lying furniture.
- 15 18. The use according to claim 17 in sealing materials for road, tunnel and water engineering and also for excavations, highwater protection and roof-sealing systems.
